DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 83 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 83 provides for the use of an anthelmintic composition, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 83 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 53-58,65,74,77,83 are rejected under 35 U.S.C. 102(b) as being anticipated by Wang et al (CN 1194832; 10/7/98). Wang teaches an antiparasitic suspension comprising ivermectin (lipophilic active) , levamisole, acetone or vegetable oil (organic solvents), emulsifier, and water. The art is silent to pH range. However, it is inherent that the pH for the prior art composition is acidic (ranging from less than 7 to less than 4) since the instant composition claims the same ingredients. It is also inherent that a suspension would have particulate matter in the solvent.

Election Status

Examiner requested the election of a single completely disclosed composition specifically defining or naming all ingredients. Applicant elected claim 53 which claims a class of macro cyclic lactones. The organic liquid carrier, emulsifier, and additional ingredients were not defined. Examiner examined ivermectin as the elected macro cyclic lactone, acetone or vegetable oil as the organic solvent, and emulsifier as the emulsifying agent. The elected composition is not allowable. See art rejection above.
